

January 27, 1982

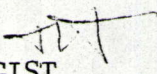

Memo to File:

RE: Mineral Energy, Inc.
Dolores Site
ACT/019/015
Grand County, Utah

On January 20, 1982, Tom Tetting and Sandy Pruitt of the Division contacted Dan Perkins on-site at the Dolores River. Dan is the on-site engineer and son of one of the owners, Demar. Processing developments at the mill were discussed, as was the history of the operation and current status of mine plan review. Questions originally mailed out to the company in June of 1981 were discussed.

Since the last on-site visit on April 9, 1981, the mill building has been completed and all site facilities, trailers and vehicles, have been removed to the top of the adjacent hill. According to aerial maps provided during the visit, disturbances are planned to include 18 acres and not the 16.5 acres suggested in the mine plan. Small amounts of sand and gravel have been run through the mill for testing purposes. Photos were taken of the current extent of operations.

It is recommended that a copy of the initial review of the mine plan completed in June of 1981 be forwarded to Larry Perkins, Box 784, Blanding, Utah 84511. Due to internal conflicts which may have occurred since that time, the officers of the company may be unaware that the Division's review has been completed.

THOMAS N. TETTING 
ENGINEERING GEOLOGIST
